

Paul Hobson

AI Infrastructure & Automation Engineer

 PaulHobson2025@gmail.com  0475 435 350  [linkedin.com/in/Paul-Hobson](https://www.linkedin.com/in/Paul-Hobson)  [git github-portfolio](#)

Infrastructure and systems engineering professional with 15+ years of experience across government, enterprise, disaster recovery, and secure operational environments including CSIRO, AFP, and multi-site technical support operations.

Combines deep practical operational support experience with modern infrastructure engineering through hands-on work in:

- Proxmox Virtualisation Engineering
- Linux systems administration
- AI workflow orchestration
- Python automation
- Infrastructure resilience engineering
- Security-aware operational design

Recently designed and documented a multi-VM autonomous systems engineering lab demonstrating approval-gated orchestration, recovery-first architecture, recursive state systems, and operational governance.

Seeking opportunities across:

- Cyber Security Operations
- Platform / Infrastructure Engineering
- Cloud Security
- Automation Engineering
- AI Infrastructure Operations
- Fulltime, Remote/WFH/Hybrid roles

Technical Capabilities

Infrastructure & Systems

Proxmox VE virtualisation
Remote Server Management
Linux administration
Windows enterprise environments
Active Directory / IAM
Network troubleshooting
Multi-site support operations

Security & Operations

Security monitoring awareness
Incident triage
Access governance
Vulnerability analysis workflows
Operational resilience
Documentation governance

Automation & Engineering

Python automation
Workflow orchestration
AI-assisted operational pipelines
Recursive state persistence
Structured telemetry & logging
GitHub Documentation
Agentic Contextual Frameworks

Portfolio Engineering Projects

Autonomous Infrastructure Orchestration Lab

[View GitHub Repository](#)

- Designed multi-VM Proxmox orchestration lab
- Built approval-gated autonomous workflow architecture
- Engineered recursive memory/state continuity systems
- Designed recovery-first infrastructure controls
- Produced full architecture diagrams and technical artefacts

Portfolio Engineering Projects Continued

[View GitHub Repository](#)

Modular Decision Automation Platform

- Built Python-based modular automation engine
- Implemented telemetry, logging, fault controls
- Designed ML-assisted scoring workflows
- Applied operational governance patterns

Security Triage Lab

- Simulated SOC-style investigation workflows
- Alert triage and structured risk analysis
- Investigation documentation and escalation logic

Employment

- **Independent Consultant — IT Systems, Automation & AI** 2022 - 2026
 - Built automation systems and AI-assisted workflows
 - Managed Linux / Windows technical environments
 - Developed structured operational pipelines
 - Designed resilient system architectures
- **IT& Technical Systems Engineering (Automation, AI & Trading Platforms)** 2023 - present
 - Built Python automation platforms using REST APIs, data pipelines, and AI/ML-driven decision logic
 - Applied machine learning and AI prompting for signal analysis, automation, and decision support
 - Implemented logging, monitoring, fault tolerance, and risk controls for unattended operation
 - Managed Windows/Linux environments, Git version control, and documentation
- **Digital Content & E-Commerce Operations (Etsy Store) Owner / Operator |** 2023 - present
 - Created and managed a digital storefront selling AI-generated visual assets
 - Handled product creation, listings, SEO, customer queries, and fulfilment
 - Maintained financial records and platform compliance
 - Demonstrates digital literacy, customer focus, and follow-through

NSW Department of Disaster Recovery – Incident Response, IT Operations & Asset Support *2017 4 month Contract*

- (Reference Available)
- Supported incident response and operational IT functions during disaster recovery activities in a government environment
- Imaged, configured, and deployed new hardware assets (laptops, peripherals) to support surge staff and field operations
- Performed user onboarding, including account setup, access provisioning, and device handover
- Assisted with identity and access management, including user account creation, permissions, and group membership
- Provided network and connectivity support, troubleshooting access issues across multiple sites and environments
- Conducted triage, prioritisation, and escalation of technical incidents under time-critical conditions
- Maintained accurate asset registers, incident records, and handover documentation
- Operated within formal government security, access control, and accountability frameworks

NEAMI National Melbourne - IT Support & Technical Coordination

2010 - 2011

- Level 2–2.5 IT support across multi-site environments
- User onboarding, account creation, and access provisioning
- Hardware imaging, deployment, and asset management
- Remote site networking support and troubleshooting
- Vendor coordination and incident escalation
- Led coordination of a multi-site network refit, including scoping, contractor onboarding, rollout sequencing, and post-implementation support
- Worked closely with network contractors on design validation, site readiness, and implementation planning
- Assisted with testing, fault resolution, and cutover support during deployment
- Ensured documentation, asset records, and configuration details were updated post-rollout

CSIRO – IT Helpdesk Support & Technical Operations - Canberra & Victoria sites *2006 - 2008*

- Delivered Level 2 IT support within a large, security-conscious government research environment
- Supported Windows, macOS, and Linux systems across diverse user groups, including researchers and technical staff
- Worked under strict security, access control, and compliance frameworks, including documentation and change processes
- Assisted with networked environments and remote site support, collaborating with engineers and senior technical staff
- Diagnosed and resolved incidents beyond Level 1 scope, escalating appropriately where required
- Built a strong reputation for reliability, discretion, and technical judgement in a high-trust environment

Skills

IT & Technical

- IT Support and Troubleshooting - Microsoft, MacOS and Linux.
- User access- Account Creation, Maintenance (MS Active Directory)
- Hardware, Software and Systems support - Mac, Android phones and peripherals, Printers/MFD's, Video and Audio equipment, Online meeting Hardware, IP Telephony
- Data handling, backups, documentation
- Records Management - Cloud and Network share drives
- Automation & scripting (Python - Practical, task-focused)
- AI & Data Tooling - Prompt Engineering, Machine Learning Pipelines

Operations & Admin

- Records & information management
- Process improvement & documentation
- Scheduling, coordination, and logistics
- Asset tracking & digital hygiene
- Vendor & stakeholder communication

Professional Strengths

- Security-aware & compliance-minded
- Independent, self-managing worker
- Strong written communication
- Calm, methodical, and reliable
- Trusted with Sensitive Information

Education

High School	1998
<u>CIT Canberra</u>	
• Diploma of Network Engineering	2002
• Cert 4 Music Composition and Performance	2000
<u>CSIRO - ITIL Team Leaders Certification</u>	2007
<u>Pheonix Institue Melbourne</u>	
• Advanced Diploma of Transpersonal Counselling	2015
<u>Coursera Online</u>	
• Google CyberSecurity Fundamentals	2026
• Google AI Fundamentals	2026

Security Clearance

- Previously held: Top Secret (TS) – Australian Government
- Eligible and willing to undergo re-clearance
- Available for non-cleared / baseline roles in the interim
- Fit2Work National Criminal History Check ref# 7469881

Referees:

- Upon Request
